

Continuous Control Assurance for *Microsoft 365*.

See your Microsoft security posture clearly. Show it confidently.

01 THE PRESSURE MICROSOFT-FIRST BUSINESSES FACE

Clients and procurement teams ask differently. Security questionnaires from corporate customers, insurers, and regulated-sector buyers expect current evidence, not annual assurance statements.

Insurers and brokers want proof. Cyber-cover renewal questionnaires increasingly ask about Microsoft 365 posture: MFA coverage, privileged access, data protection, audit logging, and retention.

Leadership asks plainer questions. Boards, partners, and risk committees want to know whether Microsoft 365 is configured properly, and what changed since last quarter.

02 WHAT SCANPOSTURE GIVES YOU

Control-level posture scoring

Evaluated across presence, coverage, quality, and strength. Not raw pass / fail.

Prioritised remediation

Step-by-step guidance into the right Microsoft admin centre, ordered by impact.

Framework-aligned evidence

Bounded readiness against eight industry frameworks. No overclaim.

Drift detection

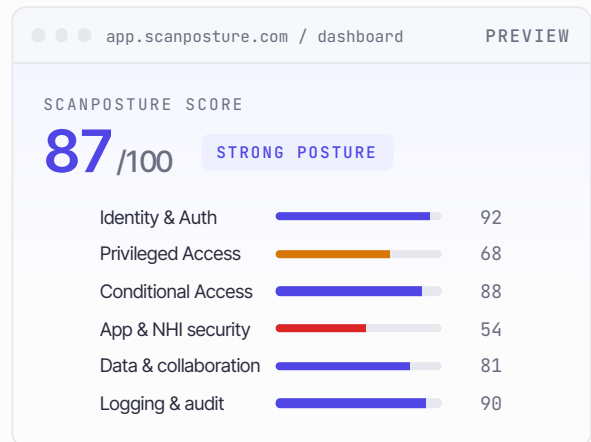

Scan-to-scan visibility on what changed, surfaced in one place.

Scheduled reports

PDF and CSV, delivered on your cadence to the recipients you choose.

Alerts to where you work

Eighteen notification channels including Slack, Teams, email, and webhook.

03 OPERATIONAL FROM DAY ONE

No agents. No deployment project. No professional services engagement. Connect read-only via Microsoft admin consent and the first scan starts automatically. First scored report typically inside one hour. The application permissions are documented before you accept them. ScanPosture is read-only and UK-hosted.

04 WHY CUSTOMERS KEEP USING IT

Security posture in Microsoft 365 is not static. Users join, apps gain permissions, guests arrive, policies are edited, roles change. Evidence becomes stale. The value of ScanPosture compounds the longer it runs.

- **Scan history** that shows progress month by month, not just current state.
- **Drift detection** that surfaces what changed since the last scan in one place.
- **Scheduled reports** on the cadence you set, for the recipients you choose.
- **Remediation rhythm** with a regular flow of what to fix next, instead of quarterly fire-drills.
- **Evidence for reviews.** Current, bounded outputs ready for procurement, insurance, or board conversations.
- **Governance workflows** for risk acceptance, access reviews, and activity records.

05 FRAMEWORK READINESS, IN BOUNDED LANGUAGE

ScanPosture shows alignment and readiness against selected technical controls. It does not itself certify compliance or replace formal assessment, certification, or legal advice.

OUTCOME-BASED

06 BEST FIT

WHO IT SUITS

Microsoft-first UK businesses with roughly **50 to 500 staff**.

WHY NOW

Need to demonstrate security maturity without enterprise IAM tooling.

SECTORS

Legal, accountancy, financial services, healthcare, logistics, professional services.

07 PRICING

Simple monthly subscription. Confirmed during proposal.

Pricing is based on tenant size and requirements, with per-user billing managed through Stripe and prorated quantity updates after each scan.

START

No setup fee

Start without a services engagement.

FLEXIBLE

No long-term contract

Keep the commitment flexible.

TRIAL

28-day trial

No card required.

08 HOW TO TRY IT

STEP 01

See the demo by request.

A populated demo walks through the dashboard, findings, framework readiness, and reports against a fictional UK firm.

STEP 02

Start a 28-day trial.

Sign up, connect read-only via Microsoft admin consent, and the first scored report typically lands inside an hour.

STEP 03

Review with your team.

If the output is useful, formalise the subscription. If it is not, walk away with no obligation.
