

CONTINUOUS CONTROL ASSURANCE

What is ScanPosture?

A clearer, more defensible way to understand your Microsoft security posture. Read-only assessment that runs continuously, scores nine control domains, and produces current, structured evidence you can hand to clients, insurers, or auditors.

201 READ-ONLY CHECKS	9 CONTROL DOMAINS	8 FRAMEWORK VIEWS	<1 hr TO FIRST SCORED REPORT

Data Access & Collaboration Security	<div style="width: 81%;"></div>	81																	
Logging & Audit	<div style="width: 90%;"></div>	90																	

<p>01 THE PROBLEM</p> <p>Microsoft 365 security is scattered.</p> <p>Configuration spans Entra, Exchange, SharePoint, Teams, Intune and Purview. Prioritisation is weak. Evidence goes stale within weeks of every review.</p>	<p>02 WHAT SCANPOSTURE DOES</p> <p>Connects read-only and shows what matters.</p> <p>Assesses Microsoft 365 controls, scores nine domains, ranks remediation by impact, tracks drift between scans, and produces reports you can hand over.</p>	<p>03 WHAT IT DOES NOT CLAIM</p> <p>Bounded readiness, not certification.</p> <p>Not a certification body. Not legal advice. Not a substitute for formal audit. Not a remediation tool. Defensible evidence of where your controls stand, framework by framework.</p>
